MBR Nylon Frame Plug for softer materials

MBR Nylon Frame Plug with a special screw made from high quality Polyamide PA6, approved for multiple use in concrete and masonry

ETAG 020 F90

1 SPECIFICATIONS OF INTENDED USE

Anchorages subject to:
- For multiple use in concrete and masonry for non-structural applications, such as façade systems, for fixing or supporting elements which contribute to the stability of the systems

Base materials:
- Cracked and non-cracked, reinforced or unreinforced normal weight concrete of strength classes ≥ C12/15 according to EN 206-1:2014
-Masonry walls and aerated concrete blocks

Approvals:
- European Technical Approval, ETAG 020 anchors for multiple use in concrete and masonry for non-structural applications

Installation:
-The influence of larger embedment depths, lower mortar strength and/or different bricks and blocks (according ETA-15/0068 regarding base material, size of the units, compressive strength) has to be detected by job site tests)

Product assortment:
- MBR Nylon Frame Plug for softer materials can be complied with countersunk, hexagon or with hexagon collar screw in stainless steel (A4/316) or in zinc plated version

Safety in case of fire:
- Anchorages satisfy requirements for Class A 1
- Assessment of resistance under fire exposure F90 for fastening of façade systems (for further information see ETA-15/0068, issued on 21.04.2021)

2 PRODUCT DESCRIPTION - MATERIALS

Product	Designation	Material	Nominal characteristic steel yield strength f_{yk} [N/mm^2]	Nominal characteristic steel ultimate strength f_{uk} [N/mm^2]	Surface coating
1	MBR Frame Plug (sleeve)	Polyamide, PA6 (Nylon)	—	—	—
2	Carbon steel (screw)	Carbon steel	480	600	Galvanized >5µm, blue passivated
3	Stainless steel (screw)	Stainless steel A4 (EN 10088)	450	700	—

3 INSTALATION INSTRUCTIONS

1. Make the hole (no hammer drilling in hollow masonry brick or aerated concrete),
2. Cleaning the hole (not necessary with hollow brick) and setting the preassembled fastener through the part to be fixed,
3. Push the anchor till the collar of the sleeve contacts the part to be fixed, then fix the part with screw,
4. Tightening the screw until sleeve collar contact.

7 IMPORTANT NOTICE

Values given in this document are valid under the assumptions of sufficient cleaning of the drill hole (not necessary with hollow brick). Resistance for tension, shear or combined tension and shear loading, is valid for a group of ≥ 3 anchors. For the design the complete European Technical Assessment has to be considered. In recommended resistance the partial safety factor for material as regulated in the ETA, as well as a partial safety factor for load action γL = 1.4 are considered. For combination of tensile loads, shear loads, bending moments as well as reduced edge distances or spacing's (anchor groups) see ETA or Mungo design software. The data must be checked by the user under the responsibility of an engineer experienced in anchorage and concrete work. This is to ensure there are no errors and all data is complete and accurate and complies with all rules and regulations for the actual conditions and application.
